The .ms file format is a custom yet basic file format that shouldn't need a whole pdf to explain, but has a pdf to explain anyways. There is an example for the 757 on the right. As you can see, comments begin with //. The parser will ignore whitespace and comments, however comments must be on their own line. Regardless of aircraft, all options under Information must be present. This is so the parser doesn't acci-dentally attempt to load settings for a different aircraft or in a different format. "acfversion" is there incase anything under settings changes due to plugin updates. Everything under the settings comment is specific to the plane. The following table lists all the variables and their settings for the 757.

```
data > modules > Custom Module >  ≡ settings.ms
   1    // Information
   2    aircraft:757
   3    acfversion:1
   4    userseen:0
   5
   6    // Settings
   7    speedbrake:1
   8    rotation:1
   9    passenger:1
  10    pitchsense:3
  11    minimums:0
```

Variable	Default	Type	Range	Description
speedbrake	1	Bool	N/A	Toggles speedbake sound.
rotation	1	Bool		Toggles sound during rotation
passenger	1	Bool		Toggles sound of passengers when boarding
pitchsense	3	Degrees	1-10	Sensitivity, in degrees, of sound during rotation
minimums	0	Bool	N/A	Toggles between "Approaching Minimums" (1) or
